Rotary Nozzles

Make sure you leave the lines crystal clear with General's rotary nozzles. The JN-RB heavy duty hardened stainless steel rotary nozzle has two 90° jets to scour the walls of the pipe, and two 35° jets to drive the hose down the line. The less expensive JN-RA hardened steel rotary nozzle has two 45° jets for combined thrust and cleaning action.

Chain Saw Nozzle

Rip through roots with the Chain Saw Nozzle. Lengths of chain can quickly and easily be switched for different diameter pipes. Spins at up to 10,000 RPM.

- 1/2" nozzle works well in combination with the 12 gpm Typhoon trailer jet to clear 4", 6", 8", and 10" lines.
- 3/8" nozzle is available in 4, 5.5 and 8 gpm models to clear 4", 6", and 8" lines.

Nozzles

Whether you're up against grease, sand, sludge, or ice, there's a General nozzle that will cut through it. Some are designed for maximum penetrating power, some to pressure wash the pipe walls, and some to go around sharp bends. All of General's nozzles are made of stainless hardened steel to last longer.

Hoses

Tough high pressure jetting hose comes in a variety of lengths and diameters. Use the 1/2" ID hose for main lines and long runs 4" through 12" in diameter at distances up to 400 ft. Use the 3/8" ID hose for clean outs, 4" through 8" floor drains, and septic lines at distances up to 300 ft. With the 1/4" ID hose, you can clear 2" through 4" lines up to 200 ft. away. And the Super-Flex 1/8" hose has the flexibility to get through 1-1/2" and 2" lines and bends up to 75 ft. down the line.

Spray Wands

Get a spray wand and use your jet for high pressure washing and cleaning applications. Spray wands are made from durable high quality components. The triggers have a light touch, yet can withstand rough usage. The wands are insulated and designed for use with a downstream soap injector. A variety of stainless steel spray nozzles are available.
